I 01. Disclaimer

Please read all sections of this disclaimer carefully and attentively. You should ensure you comprehend the nature and scope of the material presented in this white paper. If necessary, you should consult your legal, financial, tax and/or other relevant advisors before committing or attempting to participate in the CNX-Network and related endeavors.

Licenses and approvals are not assured in all jurisdictions

CNX-Network (“CoinX”) intends to operate in full compliance with applicable laws and regulations and use its best endeavors to obtain the necessary licenses and approvals. Regulatory licenses and/or approvals are likely to be required in a number of relevant jurisdictions in which relevant activities may take place. This means that the development and roll-out of all the initiatives described in this whitepaper are not guaranteed. It is not possible to guarantee, and no person makes any representations, warranties or assurances, that any such licenses or approvals will be obtained within a particular timeframe or at all. As such, the initiatives described in this whitepaper may not be available in certain jurisdictions or at all. This could require restructuring of these initiatives and/or its unavailability in all or certain respects. In addition, the development of any initiatives is intended to be implemented in stages. During certain stages of development, the project may rely on relationships with certain licensed third party entities. If these entities are no longer properly licensed in the relevant jurisdiction, this will impact the ability of CoinX to rely on the services of that party.

No advice

This whitepaper does not constitute any investment advice, financial advice, trading advice or other forms of recommendation by ‘CoinX’ its affiliates, or its respective officers, directors, managers, employees, agents, advisors or consultants on the merits of purchasing CNX-tokens nor should it be relied upon in connection with any other contract or purchasing decision.

Not a sale of security

This whitepaper does not constitute a prospectus or financial service offering document and is not an offer to sell or solicitation of an offer to buy any security, investment products, regulated products or financial instruments in any jurisdiction. CNX tokens are not being structured or sold as securities in CoinX. Owners of CNX tokens are not entitled to any rights in CoinX or any of its affiliates, including any equity, shares, units, royalties to capital, profit, returns or income in CoinX or any other company or intellectual property associated with CoinX.

No representations

No representations or warranties have been made to the recipient of this whitepaper or its advisers as to the accuracy or completeness of the information, statements, opinions or matters (express or implied) arising out of, contained in or derived from this whitepaper or any omission from this document or of any other written or oral information or opinions provided now or in the future to any interested party or their advisers. The CNX tokens, as envisaged in this whitepaper, are under development and are being constantly updated, including but not limited to key governance and technical features. If and when the CNX tokens are completed, they may differ significantly from the description set out in this whitepaper. No representation or warranty is given as to the achievement or reasonableness of any plans, future projections or prospects and nothing in this document is or should be relied upon as a promise or representation as to the future. To the fullest extent possible, all liability for any loss or damage of whatsoever kind (whether foreseeable or not and whether or not CoinX has been advised of the possibility of such loss or damage) which may arise from any person acting on any information and opinions contained in this whitepaper or any information which is made available in connection with any further enquiries, notwithstanding any negligence, default or lack of care, is disclaimed.

Third party data

This whitepaper contains data and references obtained from third party sources.

Whilst the management believes that these data are accurate and reliable, they have not been subject to independent audit, verification, or analysis by any team of professional legal, accounting, engineering, and/or financial advisors. There is no assurance as to the accuracy, reliability or completeness of the data.

Translations

This whitepaper and related materials are issued in English. Any translation is for reference purposes only and is not certified by any person. No assurance can be made as to the accuracy and completeness of any translations. If there is any inconsistency between a translation and the English version of this whitepaper, the English version shall prevail.

Restricted transmission

This whitepaper must not be taken or transmitted to any jurisdiction where distribution or dissemination of this whitepaper is prohibited or restricted.

Views of CNX

The views and opinions expressed in this whitepaper are those of CNX and do not reflect the official policy or position of any government, quasi-government, authority or public body (including but not limited to any regulatory body) in any jurisdiction. This whitepaper has not been reviewed by any regulatory authority.

Third party reference

References in this whitepaper to specific companies, networks and/or potential real-lifecase studies are for illustrative purposes only. The use of any company and/or platform names and trademarks does not imply any affiliation with, or recommendation or endorsement of/by, any of those parties.

All references to 'dollars', USD or '\$' are references to the United States Dollars unless otherwise stated.

Graphics

All graphics included in this whitepaper are for illustrative purposes only. In particular, graphics with price references do not translate into actual pricing information.

Risk Statements

Purchasing CNX tokens involves substantial risk and may lead to a loss of a substantial or complete amount of the money involved. Prior to purchasing CNX-tokens, you should carefully assess and take into account the risks, including those listed in any other documentation.

A purchaser should not purchase CNX tokens for speculative or investment purposes. Purchasers should only purchase CNX tokens if they fully understand the nature of the CNX tokens and accept the risks inherent to the CNX tokens.

Cryptographic tokens may be subject to expropriation and/or theft; hackers or other malicious groups or organizations may attempt to interfere with our system/network in various ways, including malware attacks, denial of service attacks, consensus-based attacks, Sybil attacks, smurfing, and spoofing which may result in the loss of your cryptographic tokens or the loss of your ability to access or control your cryptographic tokens. In such an event, there may be no remedy, and holders of cryptographic tokens are not guaranteed any remedy, refund, or compensation.

The regulatory status of cryptographic tokens and digital assets is currently rather undetermined, varies greatly among different jurisdictions and is subject to significant uncertainty. It is possible that in the future, certain laws, regulations, policies or rules relating to cryptographic tokens, digital assets, blockchain technology, or blockchain applications may be implemented which may directly or indirectly affect or restrict cryptographic token holders' right to acquire, own, hold, sell, convert, trade, or use cryptographic tokens.

The uncertainty in tax legislation relating to cryptographic tokens and digital assets may expose cryptographic token holders to tax consequences associated with the use or trading of cryptographic tokens.

Digital assets and related products and services carry significant risks. Potential purchasers should take into account all of the above and assess the nature of, and their own appetite for, relevant risks independently and consult professional, external and/or their own trusted advisers before making any decisions.

Professional advice

You should consult a lawyer, accountant, tax professional and/or any other professional advisor as necessary prior to determining whether to purchase CNX-tokens.

Caution Regarding Forward-Looking Statements

This whitepaper contains certain forward-looking statements regarding the business we operate that are based on the belief of CNX as well as certain assumptions made by and information available to CNX. Forward-looking statements, by their nature, are subject to significant risks and uncertainties.

While this white paper has been prepared with the utmost attention to detail, with the most up-to-date factual information regarding the market of blockchain it also contains ‘forward-looking statements’. These forward-looking statements should not be taken as historical fact as they rely on projections, plans and possible prospects garnered towards the future. They are inherently subject to all sorts of risks and uncertainties.

Forward-looking statements may involve estimates and assumptions and are subject to risks, uncertainties and other factors beyond the control and rational predictions of CoinX. Accordingly, these factors could cause actual results or outcomes that differ materially from those expressed in the forward-looking statements.

Any forward-looking statement speaks only as of the date of which such statement is made, we undertake no obligation to update any forward-looking statements to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events.

| 02. Executive Summary

What is CNX-Network?

The first sustainable worldwide blockchain technology network, offering encrypted, interconnected and same interface applications that are used in daily life, running on its own blockchain and currency. CNX Network is committed to becoming the most widely used decentralised blockchain system, providing user friendly applications and a global community.

CNX-Network is one the first worldwide blockchain payment system that offers its users a universal and similar environment in which to access and use cryptocurrency wherever and whenever they so choose. The crucial aspect of CNX-Network in comparison to its competitors that seemingly offer similar services is that CNX-Network will have ease of access and ease-of-use for all its customers. By offering a similar environment and a variety of platforms, users will have no difficulty logging in and overseeing their account and revenues.

CNX-Network has the potential to shift the payment system to a faster, better and more reliable system. The true potential of CNX-Network will eventually be realised through its users, they will eventually be in charge and their influence will decide the fate within our crypto borders. We foresee that these users will enable CNX-Network to race past all other crypto predecessors that are currently employed as well as be competitive with future brands. Since we invest in people and sustainable technology it will be very likely that CNX-Network will become one of the most popular and widely used payment systems.

Why CNX-Network?

Current systems that deal with cryptocurrencies are unfriendly to their users, do not facilitate understanding and/or the use of cryptocurrency. The interface and experience of these systems are not catered to the needs of users, often not diverse in their applications or poor in communications across different apps. CNX-Network will solve these issues by offering a series of applications, with a similar interface, interconnected yet private and secure. In combination with its own cryptocurrency CoinX, people can become part of a global community, trade, invest and save coins with a simple log-in to one account.

Utility & Benefits of CNX-Network

-  First decentralized world wide payment method for daily use
-  One account for a universal platform with a great number and variety of apps
-  Similar appearance across apps facilitating user friendliness
-  CNX-Network related cryptocurrency CoinX
-  Secure and private access to personal accounts
-  Environmentally sustainable
-  Autonomous data processing
-  Transparent record keeping and data analysis possibilities
-  Secure data storage
-  Global community with exciting possibilities for members, whether user, developer or entrepreneurs

CoinX Initial Offering and Distribution

CNX-Network has a capped supply of 12.1 billion CoinX, of which 3.6 billion CoinX will be sold in progressive rounds of an Intertial Coin Offering. The remaining coins will be managed and distrubuted in the following table

CNX TOKEN ALLOCATION			
Details	%	Amount	Vesting Period
 CNX Pre-sale	24.8%	3.000.000.000	N.A.
 Airdrops Events	4.5%	605.000.000	N.A.
 CEX Listings	10%	1.500.400.000	N.A.
 CNX-Miner Community	1%	121.000.000	N.A.
 Backers	22.8%	2.758.800.000	N.A.
 Staking Rewards	18.6%	2.250.600.000	N.A.
 Development	7.8%	943.800.000	N.A.
 Core Team	10%	1.210.000.000	N.A.

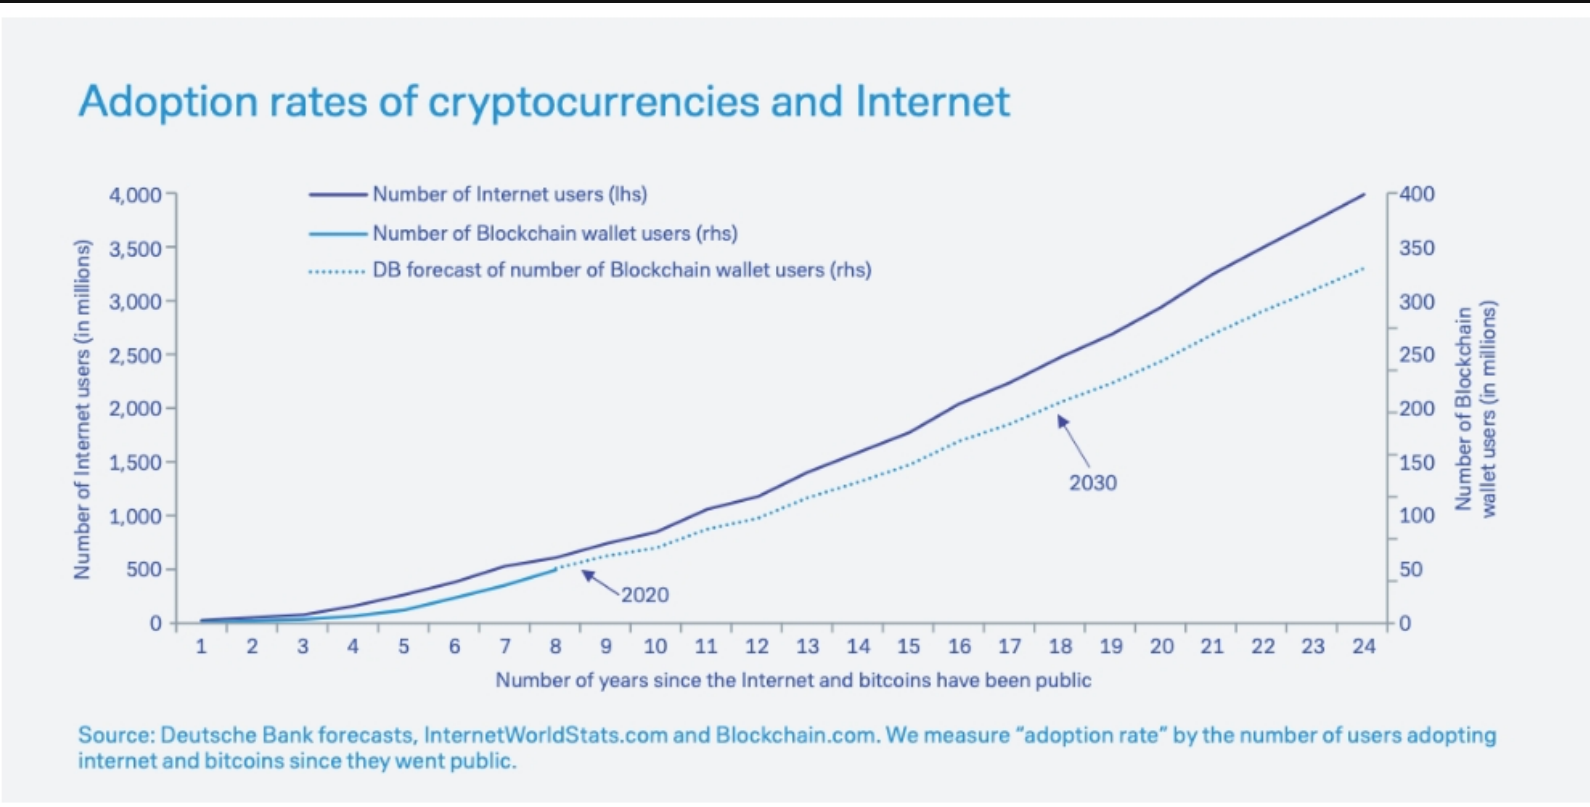

03. Introduction

This introduction offers a problem statement concerning the contemporary use of cryptocurrency, followed by the mission and vision of CNX-Network in how to address these issues.

Problem Statement and Our Strategy

Problems in contemporary Cryptocurrencies/ Exchanges

Notwithstanding the popularity and increasing attention that cryptocurrency seems to garner in all forms of media, research publications and political discourse; for the ordinary individual the use of such a form of currency still seems well beyond their imagination. In a report by Deutsche Bank, the following forecast was presented with regards to the adoption rates of cryptocurrencies and the internet:

Consequently, the current lack of use shows that there is something that needs to be addressed.

One of the sub-problems in the aforementioned lack of use is the fact that most

people still have difficulty understanding the basic principles of cryptocurrency. This may make them wary of employing it.

Another reason for the general lack of use is that there has never been a consistent and universal explication and practice of crypto such as some national currencies garner universally nowadays. Simply put, the user interface and experience in all contemporary crypto applications is very poor and does not facilitate further engagement with the crypto as such.

There is also another problem that most of the people who invest in coins are not thinking their investment through logically and rationally. They are simply buying coins without any comprehension of what it is they are actually acquiring. This is related to a side problem that most crypto exist with the purpose of simply making money without any additional aspirations or ambitions.

In short, the problems with contemporary crypto are the following:

- The user interface and experience in all contemporary crypto applications are very poor;
- People fail to realize that most of the cryptos that are online have no larger purpose and they are just invented as money-making tools;
- Quite a number of people are just investing in coins without thinking;
- A lot of people still do not know about and/or understand what cryptocurrency really and truly is.

Our solution: CNX-Network and CoinX

We create several platforms where people can use their CoinX. All these platforms will have one general semi-same design. This way, the user will be familiar and acquainted with the use of the other platforms, even before using them.

In addition to the ease of use, our crypto actually has a purpose, it will be first used in our own network. People can join our network and get a .CNX link where they can manage their platform. In this manner, we invest in developers and new business owners, to build with us on our success. This will mean a global

community of CNX users that has a universal access to their own records, transferral to any national currency and/or other business endeavors with a simple log-in to one account.

Potential of CNX-Network

CNX will be one of the first decentralized world wide payment methods used for daily purposes using crypto and other forms of currency. Users all over the world can easily transfer coins to each other with a low service fee. Our focus is to create massive worldwide platforms which all work together in high-end quality on the CNX-Coin and CNX-Network.

By increasing ease of access, CNX will facilitate understanding and the use of cryptocurrency. Consequently, people can employ and deal with cryptocurrency in a more direct and efficient manner. Increasing the worldwide use and employment of cryptocurrencies in all forms of financial transactions as well as web-based new ventures.

Next to it we have an investor program where freelance developers and entrepreneurs can use the CNX-Network for their ideas. When people come up with great ideas that can help the CNX-Community further, CNX will invest in the business development to create franchises. As a bonus, the business(es) will get their own .CNX domain.

Moreover, CNX is aware of upcoming concerns regarding the use of energy in order to maintain the blockchain technology. In order to counter the current state of affairs, CNX will use new and alternative forms of energy supply such as geothermal sources.

Lastly, as is evident from the above, CNX is not merely a functional tool, but a network with a mission. CNX-Network and its accompanying CoinX are more than simply a facilitator. By having a clear objective, offering ease of use and universal access, employing several programmes for investors and/or collaborators and

paying attention and consideration to energy concerns CNX-Network is a contributor and creator. As such, it is one of a kind.

Mission

Belief

CNX-Network was founded on the belief that it is a basic and universal human right to control one's own money, data and identity. We believe that decentralization holds the key to empowering people around the world to better safeguard their rights, and that we are helping the world move in this direction by accelerating the transition to adopting cryptocurrency.

Userfriendly and straightforward

The main mission of CNX is to provide the first worldwide blockchain payment system that offers an individual the easy access and use of cryptocurrency wherever and whenever they so choose. This access and use of cryptocurrency is comparable and in addition to the current use of national currencies. In this, CNX would be the first of its kind. This is because CNX is founded on the principle that everyone should be able to control their own funds, data and identity autonomously. As the world faces increasing globalization, we believe in individual decentralization in order to facilitate people in the use of cryptocurrency.

Several securely connected platforms

In order to reach this objective, CNX builds a payment system in which cryptocurrency is used as a payment method in the real economy, based on our own developed blockchain technology. We are developing several utility platforms that we will link in the CNX-Network with CoinX as payment system.

By linking all these platforms – online as well as offline – through one universal system that works the same globally for all users all the time, the user-friendliness will greatly increase. The interface of each platform will be recognizable and

similar to a general extent so it will facilitate and increase the use across platforms by its users. Additionally, we will employ CNX-Connect. This is our method to ensure that users will only have to create an account once, instead of having to create several identities to log in across the different platforms. There is only one account needed and the ease of authenticating is guaranteed by the use of an authenticator application created in house. Safely secured by all the necessary and latest security measures.

Global Currency CoinX

Another important goal for CNX is to have a currency that can be used worldwide so that there is one currency for all countries, that can be transferred into the currency of the country of choosing/where the user is living without any costs of transfer. The fact that one does not endure transaction costs ensures a simple, clear and straightforward transaction system.

CNX is the first that creates large platforms and will link these to our own independently built blockchain payment network.

Vision

Decentralised Network with multitude of platforms

CNX-Network will build a decentralized payment system in which cryptocurrency is used as a payment method in the real economy, based on our own developed blockchain technology. Our vision is to create a utility network of a multitude of platforms that all will work aligned and harmoniously with one another.

Depending on the preference of the individual a large number and diverse range of platforms will be available. We are developing several platforms, more than a few dozen at least, that we will link in the CNX-Network with CoinX as payment system.

Unlimited possibilities with one account

By making use of several platforms a decentralized network will arise which will guarantee a more sustainable form of security. Considering the CNX-Network will be global, there is an increased ease of use for the customer as all the applications will have the same general style of experience, lay-out and functionalities.

Consequently, one does not need to use three different profiles and associated passwords in order to keep one company running as it is all available through the same universal yet individual account that can be used to log into several different platforms and applications.

Research & Insights

Blockchain Technology

Blockchain technology is the most tamper-proof decentralized data structure that joins data blocks chronologically. The nature of the blockchain is a distributed ledger system. Like Bitcoin, the digital currency that has currently overtaken payment systems in whole countries. CNX-Network Serves the purpose of creating a decentralized payment method. It is clearly foreseeable that open-source blockchain technology will eventually take over or replace the weak, traditional and non-decentralized system that most countries and companies are using nowadays. The non-decentralized nature of these traditional systems leave it vulnerable for all forms of attacks, both physical and cyber related. The CNX-Network using blockchain technology will have not one or a few points of vulnerability but too many to oversee or attack simultaneously. Therefore attacking one node or a few nodes in blockchain technology networks (data blocks) will prove to be non-effective as all worldwide nodes will have to be hacked simultaneously in order for a hack to work.

Blockware

Our developers have created a unique system that they call blockware which will secure and solidify the CNX-network as a whole. The Blockware is entirely

transparent for all the applicants of the nodes. As it is our own tamper-proof decentralized open-source technology that is connected to all possible nodes in the CNX-Network.

CNX-Network is not only a means to join the crypto space for free by mining coins using the CoinX-Miner App. It also allows everyday people to advance to the next stage of the inevitable massive worldwide adoption that is already currently happening. CNX-Network is using approachable methods to increase this adoption by releasing high-end applications and investing programs like free crypto mining as well as its own coin: CoinX.

Value Propositions

Decentralised Network with multitude of platforms

CNX is a mobile payment service that will allow users to pay in and/or receive cryptocurrency anywhere, anytime for a low fee (max. 0.25 USD per transaction). For other currencies, there is an additional fee to be determined by the broker of this currency. This is outside the scope of CNX and will come in addition to the 0.25 USD. This product is powered by CNX-Blockware, our native blockchain solution (see section below for details).

CNX delivers the following value propositions:

- Low fees: users pay up to 0.25 USD processing fees for settlements in Crypto;
- Easy to use: easy to set up, view and manage payments in a matter of minutes;
- For developers. By developers. We have expedited the process to start accepting cryptocurrencies with just a few lines of code.

CNX-Ecosystem

CNX builds an ecosystem with all kinds of softwares that are used in daily life. These software systems will further an easy login to all platforms through CNX-Connect. In our ecosystem, we only use CoinX as a subsider payment gateway next to local valutas. CoinX can only be purchased in WalletX.

| 04. CNX-Network

CNX-Utility Network

CNX builds platforms that are connected to the CNX-Network. These platforms work through CNX-Connect (for more information see below) and are all connected to each other.

CNX-Connect is a system that will link most apps with each other, this means that almost no app will be working separately or independently. Currently there are 5 distinct applications and 2 software applications that all work on the CNX-Network. More apps are currently in development and will be announced in the coming time. The goal is to eventually have more than a few dozen apps that will be used by everyone around the globe. Some apps will be self-sustainable, meaning they will not need CNX-Connect to work. These apps have their own form of smart intelligence and will also not need a lot of maintenance and/or resources to function.

Blockchain

CNX-Blockware is a peer-to-peer network of computers and servers known as 'nodes' that both participate and monitor the transfer of information and assets. Every transfer is recorded on each user's computer.

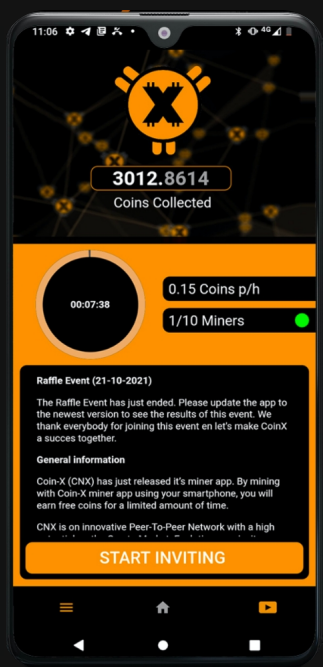

CNX-Nodes

Nodes for the CNX-Network are used to communicate and share data with each other. This form of technological infrastructure will ensure that all nodes stay connected and will always stay up-to-date. Nodes can for example store data, spread data and/or even create new data, they are the most important parts in and of the blockchain. This also makes it nearly impossible for hackers to infiltrate the network as they would have to hack all of the nodes all at the same time.

Nodes for CNX are currently available to apply on our website. By downloading a node an individual is actively strengthening the CNX-Network.

Applications

CNX-Network will develop a multitude of applications in the coming years. The eight mentioned below are what CNX-Network will start with as they are quintessential for the basic operation of the network as well as the trade and use of its own cryptocurrency CoinX. They can be divided into two groups: 5 distinct CNX-applications and 2 software-based CNX applications. Below they are described in more detail.

CoinX Miner App

Description:

An app where people can earn free coins for a limited amount of time by joining our community. This app is a promotion before the ICO launches. The more people join the app, the less people can earn.

Benefits:

- Organizing events for our community to create brand awareness;
- Building up goodwill by giving away coins to developing countries;
- Testing and possibly refining blockware with CNX-Connect;
- Fast login through CNX-Connect and Authenticator;
- Proof that we are secure with the data of our users.

CNX-Connect

Description:

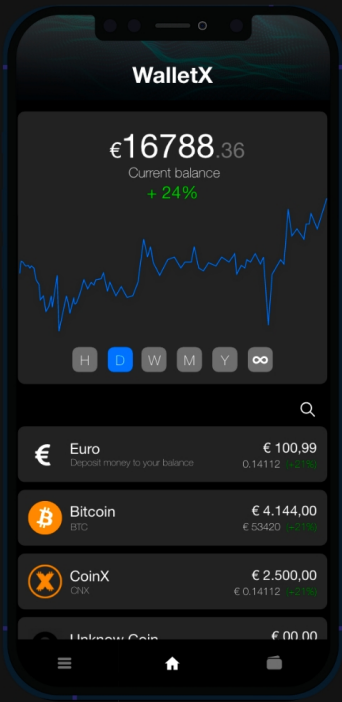

CNX-Connect is an authenticator app that we manufactured and developed at CNX-Network. It is an extra safety feature. This feature is needed for every new login. The authenticator creates a new 6-digit code every minute and has more safety features. Through this app, people can register themselves at the CNX-Network and gain access to its associated apps. When users have registered themselves in this app, they can login quickly and easily.

Secutity measures:

- High security system to avoid data leaks;
- Always authenticating new logins through the CNX-Authenticator App (see below), SMS and Email verification;
- Extra protection for the other CNX-Network Apps;
- Personal decision opportunity whether or not to use the authentication.

Benefits:

- Users will only have to register once to the CNX-Network to use all the apps;
- Quick login to the CNX-Network;
- API available for all other companies who want to use CNX-Quick login;
- Individual choices regarding what users want to share with other companies;
- One place only where users have to fill in their personal data. No more account creating. Simly the use of one quick and safe login system.
- Nobody can simply login on accounts of users without them knowing;
- Companies can use the CNX-Authenticator for their companies;
- High security system.

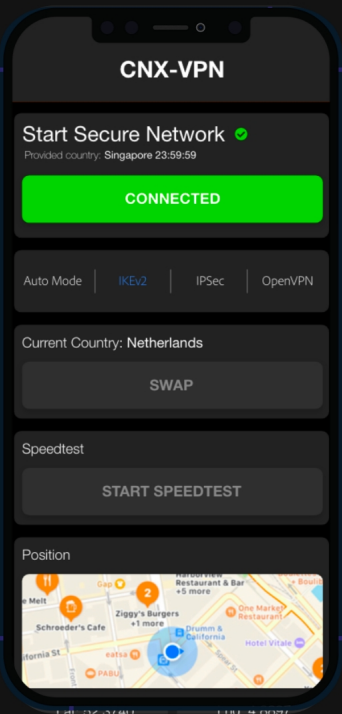

WalletX

Description:

Trading platform where people can buy and sell crypto. To get into this wallet, users need to create an account on CNX-Connect.

Benefits:

- Safe & Quick login through CNX-Connect;
- Stake CoinX to earn more coins;
- Possibilities to invite people to join CNX-Network, and earn CoinX;

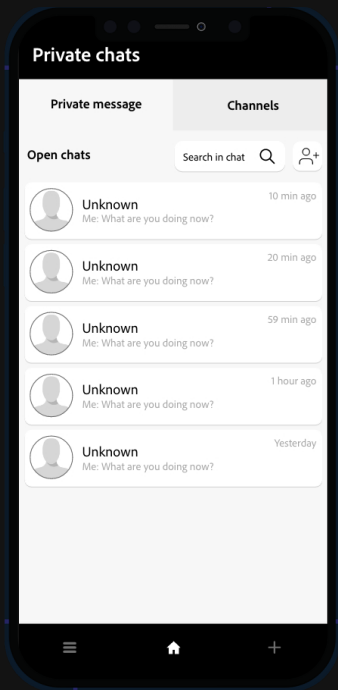

VPN

Description:

Hide your location with the CNX-VPN application and browse on the internet anonymously. The VPN is free for investors who have invested 35 USD or more.

Benefits:

- Safe & Quick login through CNX-Network;
- Secured VPN Network;
- Supports OpenVPN, IPSec and IKEv2;
- Positioning choice;
- Speedtest function.

MetaChat

Description:

New generation messaging app where people can create groups worldwide. Everybody can join channels. There will be free channels and paid channels. Some groups will have a monthly subscription (every channel-owner can create a paid channel service). These can be all kinds of groups, for example business or crypto groups can create these paid channels. The owner of the channel will be paid monthly in CNX and members will have to pay monthly. Messenger is connected to the WalletX, so transfers will happen in our own network.

Benefits:

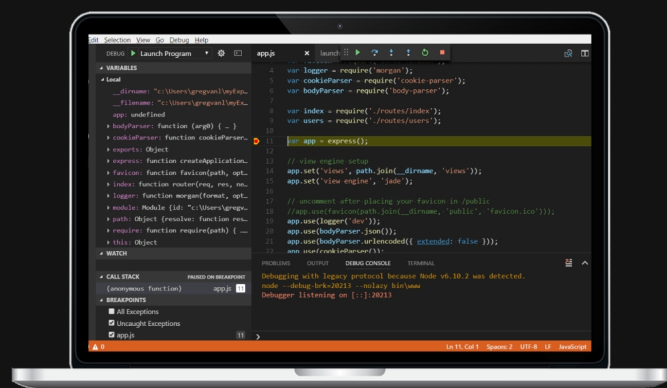

- Safe & Quick login through CNX-Network;
- Full Encrypted Data Messenger (FEDM);
- Free channels;
- Paid channels;
- Free messaging;
- Add people by username.

Safety features:

- People will have to create a username that is different from the KYC-app. With this username, people can add other users. This way we keep the privacy of every user with the FEDM secured;
- Encrypted data.

Vision

Once the Facebook metaverse is out, we will create a new generation chat function for the metaverse.

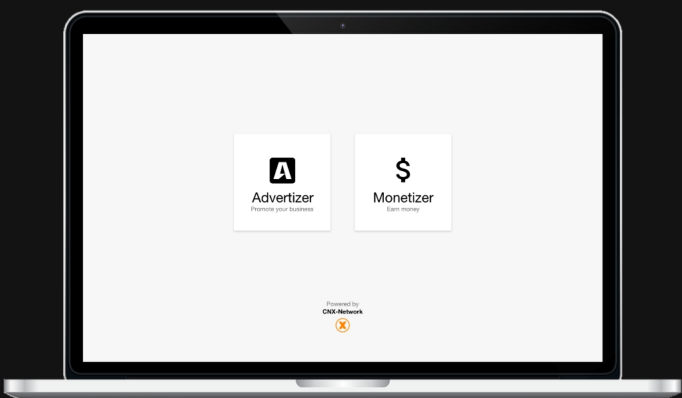

Nodes

The node or computer supports the network. It supports it through validation and relaying transactions. At the same time, it also gets a copy of the full blockchain. Any computer that connects to the CNX-network is a node.

People can apply to the nodes and first have to go through a KYC. After that, users will have acces to our nodes.

Benefits:

- Efficient performance.
- Easier development process.
- Reusable code.
- Ability to handle multiple requests.

AdManager

AdManager is an application where people can see ads all over the internet.

These can be divided into two sections:

1. CNX-Advertiser: the place where people

can make and publish digital advertisements; 2. CNX-Monetizer: the place where users can place and run advertisements on their own site or application.

Benefits:

- Efficient performance.
- Easier development process.
- Reusable code.
- Ability to handle multiple requests.

Decentralized Financial Services

To ensure an ecosystem in which all services and platforms will be decentralized CNX has developed the utility network; these are several platforms that work on the CNX-Network. These platforms are similar to each other and most of the apps will be connected with each other. All apps will look similar to each other for a better user experience. Creating at least 100 platforms is the best way of enhancing worldwide decentralized service usage.

With DeFi, the markets are always open and there are no centralized authorities who can block payments or deny you access to anything. Services that were previously slow and at risk of human error are automated and safe, now that it's handled by personal authentication code so it can be verified.

DeFi refers to financial applications built on blockchain technology that enable digital transactions between multiple parties. The blockchain is essentially a public ledger for digital assets, including cryptocurrencies. DeFi can involve lending but is not limited to crypto, sending crypto, or investing crypto.

Value Proposition

To take one more step towards letting users better safeguard their money, data and identity, we are launching the WalletX, which is a non-custodial wallet app that allows users to gain full ownership of their private keys.

WalletX offers the following value propositions:

- A. Decentralized product: giving users full control of private keys (and crypto) which are placed back in the hands of users
- B. Secure wallet protected by the encryption of private keys on the user's device, combined with passcode, biometrics and 2-factor authentication;
- C. Flexible transactions with customizable confirmation speed and network fees;
- D. Convenient connection to the CoinX App to easily access the diverse crypto financial services offered by CoinX.

Security

CNX-Network views security as a crucially important aspect of the appeal and foundation of its network and associated coin, CoinX. Through the use of blockware technology all data and records will be safe from hacking initiatives or malware. The decentralization of the network and multiple platforms allow for a secure chain that is virtually impossible to destroy. CNX-Network will offer the following mechanisms:

- Maximum safety: by building our own apps and employing our own authenticator CNX-Network can oversee and test all the applications before running and as such guarantee a maximum safety with the products used;
- Maximum decentralization: given the fact that anyone from anywhere can join, CNX-Network will allow for a maximum of decentralization in its user base and clientele, thus making it more robust for any outside interference(s);
- Private risk management: CNX-Network values its users more than anything and realizes the risks people expose themselves to when becoming active on a web-based platform. Consequently, CNX-Network will protect the data collection and personal details of its customers by implementing the most stringent risk tools;
- Secure cryptocurrency trades: CNX-Network realizes the potential for disruption and possible obscure nature of cryptocurrencies and will ensure that the trade and use of CoinX as well as other cryptocurrencies in the WalletX will be as secure as possible.

Guarantees and certificates

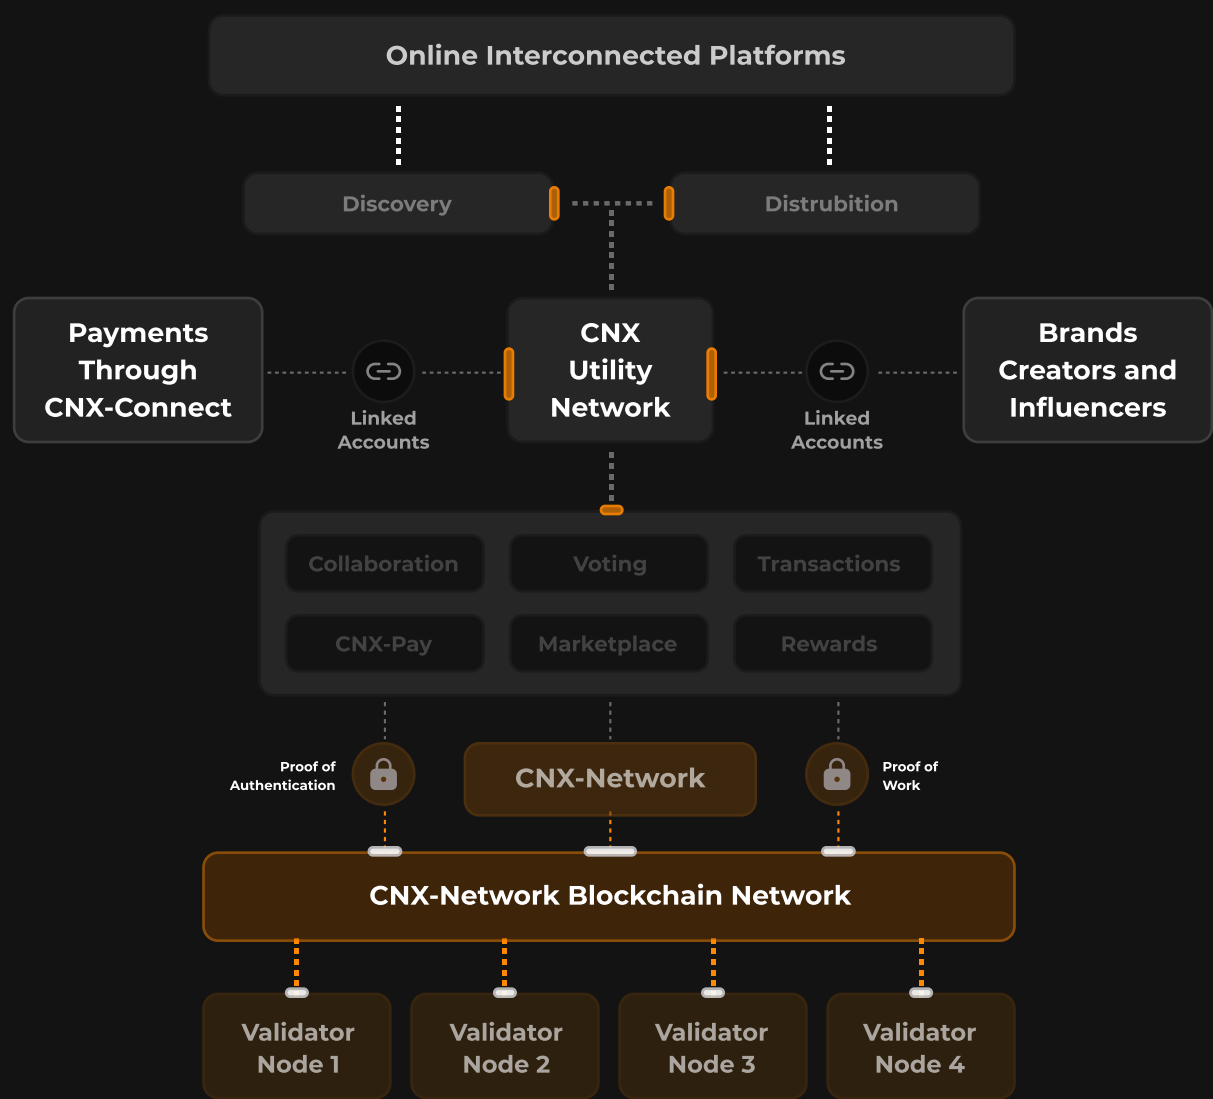

In order to reach the afore mentioned security concerns CNX aims to obtain the following standards and certificates through or with the following companies.

ISO/IEC 27701:2019 Certification is the “Gold Standard” for privacy risk management. The audit was conducted by SGS, a leading inspection verification and certification company recognized globally.

ISO/IEC 27001:2013 Certification is the “Gold Standard” for information security management. The audit was led by Bureau Veritas, a global leader in Testing, Inspection and Certification.

PCI:DSS (Payment Card Industry: Data Security Standard) outlines a set of strict requirements set by the payment card industry and is designed to ensure that organizations which process, store and/or transmit credit card data maintain a highly secure environment, and uphold the highest data security and privacy standards. Level 1 is the highest level of certification, which is what CNX seeks to obtain.

CCSS (Cryptocurrency Security Standard) covers a series of strict security requirements of any information system that stores, transacts with, and/or accepts cryptocurrencies and applies to all information systems that make use of cryptocurrencies, including exchanges, web applications, and cryptocurrency storage solutions.

05. CoinX

Coin Creation and Basic Information

As mentioned before, CNX-Network will not only offer individuals the chance to manage their financials via one easy log-in that will provide access to a multitude of applicationsapplicatoins but will also introduce its own cryptocurrency called CoinX.

Asset name	CoinX
Token Sticker	CNX
Issuing Entity	Letsch BV
Market Cap	12.100.000.000
Circulating Supply	3.600.000.000
Pre-sale Supply	3.600.000.000

Distrubution Mechanics	- Presale
	- Airdrops
	- Sales for business development
	- Staking rewards
	- 100% Decentralization
	- DeFi
	- NFTs

Investment Rewards

Investors of the CNX-Network are recieving investment rewards as a thank for investing early in our project.

\$35,-

Pack 1:

Free VPN for lifetime

+10% Extra CNX for Miners

4.375 CNX

CNX-VIP member + NFT

CNX-24K Gold Coin + NFT(Limited Edition)

5 more items

4.375.000 CNX

Pick

10% Extra for CNX-Miners

For the users of the CoinX Miner App that have started mining before 30-04-2022 will receive 10% extra coins.

VPN Service

Every user that has bought 35 USD+ of CoinX will receive a free option to use this VPN Service offered by CNX-Network. This VPN service will remain available when an investor has bought 35 USD of CNX during the pre-sale investor will receive a free VPN for lifetime.

Apple Music or Spotify

Starting at 3.500 USD a user will receive a free subscription to Apple Music or spotify for one year.

Disney+

Starting at 3.500 USD a user will receive a free subscription to Disney+ for one year.

Microsoft Office

Starting at 35.000 USD people will receive free Microsoft Office subscriptions for one year.

Amazon Prime

Starting at 35.000 USD a user will receive free Amazon Prime for one year.

CoinX 24k Golden Coin + NFT

Starting at 35.000 USD, investors will receive a 24K gold coin with a value of 8.000 USD. Next to this, users will receive a free NFT with a golden label. There is only a limited stock of 100 coins and golden label NFTs. There will never be more.

Pure Silver Coin + NFT

Starting at 3.500 USD, investors will receive a pure silver coin with a value of 800 USD. Next to this, users will receive a free NFT with a silver label. There is only a limited stock of 500 coins and silver label NFTs. There will never be more.

Bronze Colored Coin + NFT

Starting at 350 USD, investors will receive a pure silver coin with a value of 800 USD. Next to this, users will receive a free NFT with a silver label. There is only a limited stock of 1.000 coins and silver label NFTs. There will never be more.

Presale Staking

The staking rewards can be cashed out whenever people want. It works on APY (Annual Percentage Yield) base and is only possible for 1 year of staking. You can cash out whenever you want to.

Example: You have invested 3.500 USD. Your Staking reward is 7% over a year. You decide to cash out after 6 months, you will receive the half (3.5%) of the 7% you would receive.

CNX-VIP Member

VIP-Members will always get early access to new attributes in our network. Always 3 months free of charge with almost everything.

CNX Creditcard

For investors from 350 USD, CNX will provide a prepaid creditcard for free.

CoinX Mining Program

The CNX Core team uses a way to ensure that everyone has a fair and equal chance at joining the CNX-Network. The biggest contemporary challenge that most people have is that everyday internet users have problems using crypto as they do not know what they are doing. Either people just invest to make a measurable profit in trading or they invest because they think a coin or project has potential for the future, but 3 in 4 people have no clue what they are investing in. CNX-Network is here to facilitate the use of cryptocurrency, specifically CoinX, by making the process transparent and usable for everyone. In order to do this CNX-Network is introducing our Mining program.

Environment

The mining program is used to increase the CNX-Network user base by simply letting users mine coins using their smartphone device for free. This will make CoinX more attractive and at the same time more desirable. Bitcoin has already proven itself by expanding to a global user base. Bitcoin is minable but this is extremely negative for the environment. This is where CNX-Network provides a new and sustainable solution. By releasing multiple utility apps aside this new crypto ecosystem CNX-Network and its accompanying CoinX will be immediately usable and minable. Our goal is to improve in areas that other crypto currencies are struggling with. Most currencies are minable by using expensive hardware and additionally have high energy costs. This is extremely detrimental for the environment and has specific negative consequences such as those regarding climate concerns. The only question that needs to be put on the table is how can we make mining more energy efficient? In order to answer this question CNX-Network is actively developing, identifying and finding new ways of transforming the low efficiency currently on display and poor environmental mining to more environmentally friendly and sustainable alternatives, for example by using the geothermal energy created by volcanoes and geysers to mine instead of the traditional energy resources.

CoinX mining use

At CNX-Network everyone is allowed to mining and at the time of writing CNX-Network has already gained more than 100.000 users within the first few weeks of launch. Users are able to mine CoinX for free in the current release stage of the coin by simply downloading the app and using it daily. Coins that are mined will be worth money in the future. This means that people will be able to earn money by simply joining the CNX-Community.

CNX users that mine daily and consecutively will be put higher on our waiting list. Not all users will be allowed on the WalletX immediately. We will carefully allow users in our waiting list to enter WalletX daily and will not allow everyone to join WalletX immediately. This will prevent dumps of the coin and will encourage stable growth for the coin value. This means that users will be able to transfer their coins to the WalletX if they reach the end of the waiting list. This also means that the more active people are in our community the faster they will be able to join WalletX in the future.

Planned for use

1. Preventing dumps

- To prevent dumps and to create stability and security to the liquidity of CoinX, it is not allowed for development and Core Members to sell more than 5% of their own supply every month;
- If the price of CoinX decreases by more than 10% that month, then the amount of coins that the Core Members have sold that month will be forced to be bought back the next month. until the course of the coin reaches at least -8% or a lower negative or any positive number;
- All coins that have been sold by any of the Core Members will be checked and noted so no anomalies will occur;

- Core Members are not allowed to sell more than 10% of their supply annually starting from 06-06-2022 until 06-06-2024. After this date, new rules will apply;
- All 4 above points will be overseen core members and an independent party.

2. Increasing coin value

To Increase the value of CoinX

- CoinX will be listed on multiple exchanges starting with our own WalletX;
- CoinX will be used on multiple platforms creating more demand for the coin;
- CoinX has a coin cap, making the coin more scarce and creating a higher demand for the coin;
- CNX will burn coins, this will increase the coin value.

2. Burning Coins

As stated above, one of the strategies employed to increase coin value is the burning of coins. This entails sending coins to a wallet or account that can only receive and not send. These accounts are sometimes called ‘dead’ wallets as they can under no circumstances be activated or used in the normal manner.

The timing and strategy regarding burning coins differs across other platforms.

Generally there are three main manners in which one can decide and execute the burning of coins:

- depending on circumstances, to be decided by the board or another governing institution within the CNX-Network responsible for the maintenance of CoinX;
- at set intervals, to be decided upon by the board or another governing institution within the CNX-Network responsible for the maintenance of CoinX;
- by organizing specific burning events, to be decided by the board of CNX, the governing institution within CNX responsible for the maintenance of CoinX or other members of the CNX-Community.

CP-Decisions

CP-algorithm

Crowd-Protocol (CP) single-layered based recursive priority enhancement decision making is the final gadget working in our Blockware-system that utilizes consensus algorithms to ensure that all the eligible management members function within the same core ecosystem. Also this CP will ensure careful extraction and implementation of high value and functional components within the inherent CNX-Blockware. Whereas negative value or $CP < 1$ Will always stall a decision within the current Blockware version. Components using CP can be reconsidered.

$$CP = \left(-1^{d \text{ (Board members and head)}} * -1^{y \text{ (head)}} \right) + 1^c \text{ (positive community vote)}$$

Whereas decisions shall take place several times during the development of the Blockware-system, it is important to differ projects and highly informative decisions and parts from each other. All projects in the CNX-Network ecosystem contain weight and some project have a higher value. If so, that project will be favored above others.

Community influence

Some projects are insufficiently independent to be passed straight on through our CP system alone, therefore the community will be able to vote in favor or against a decision made by Board Members. This means that the community could also have a big influence on what will happen in our ecosystem.

| 06. CNX Community

CNX-Network aims to be a global community attracting people from all over the world that have an interest in cryptocurrency or connections via a universal platform with a userfriendly interface and transparent, decentralized and secure underlying foundation. As such, CNX-Network offers two main programs for its users, the investor program and the referral program. Below is a more detailed description of these programs that have several options contained within them.

Investor Program

CNX-Network has several investing programs for investors that are willing to invest directly in the CNX-Network. We have currently limited the investing programs to three options. It is possible that more options will become available in the future, but for the time being CNX-Network will offer three.

1. Development program

Developers with great ideas can apply for our Development program via and through the CoinX Miner App. They can develop apps and/or generate ideas, which, after approval by the CNX-Network, we will invest in with coins and/or cash. An important key feature is that ideas and apps will have to be connected to the CNX-Network. CNX-Network needs to be a priority as a payment method and the CNX-Network inhouse style will have to be implemented into an idea, app or feature, in order for it to be accepted.

1. Node program

Nodes for the CNX-Network are used to communicate and share data with each other. This form of technological infrastructure will ensure that all nodes stay connected and will always stay up-to-date. Nodes can for example store data, spread data and/or even create new data, they are the most important parts in the blockchain. This also makes it nearly impossible for hackers to infiltrate the network as they would have to hack all of the nodes all at the same time.

Applying for a node is available by sending an email to admin@coinx-miner.com

By downloading a node an individual is actively strengthening the CNX-Network. This way, people can earn CoinX by actively using our node.

Afiliate Program

In order to strengthen the CNX-Community the referral program offers several succinct possibilities for people to become active and earn CoinX at the same time. There are three separate referral initiatives detailed below.

1. CoinX App Referral Program

To create our community, we have created the CoinX miner app. Users can earn free coins by joining our community. On every referral, the user will get 1 CoinX as an invite bonus. Users can invite an unlimited amount of people.

1. CoinX App Referral Program

Our referral program for WalletX provides some of the largest rewards ever seen in the industry. Both referrers and their referred friend(s) receive a \$25 USD bonus (in CoinX) with each successful sign-up and CoinX- staking for any metal VISA card on the CoinX App.

Refer & Get \$25 USD in CoinX (Withdraw only possible when users have traded at least 250 USD.)

All eligible WalletX App users can participate in the referral program, with no limits on the number of referrals. Bonuses of the referral program are credited instantly - referred friends can use their sign-up bonus immediately after they make a valid transaction.

Operating Countries

CNX-Network will attempt to do business in as many countries as possible. Unfortunately, in some countries we are not allowed to operate due to legal issues. Below is s a list of the countries we will currently not operate in:

- Russia;
- Ukraine;
- Iran;
- China;
- North Korea.

We are not allowed to operate in these countries because of certain legal and economic sanctions. In all other countries that are not mentioned above, we will be operational.

Roadmap

In here you find the roadmap for CNX-Network.

Release roadmap 2023

IN PROGRESS

I 06 The Company

In the future CNX will be invested in developing the following services and functionalities. Below is a detailed description of the NFT Marketplace and a special CNX Prepaid Card. These are one of the many services we will provide in the future.

NFT Marketplace

NFT Marketplace will allow users to divide NFTs into “Fragments”. NFT stands for Non Fungible Token and is a means of relating ownership to digital artifacts. In the case of CNX-Network these will be called ‘Fragments’. NFT Fragments are fractions, which in total represent the sum ownership of an NFT. Think of them as partial ownership of an asset, or merely a digital collectible, wherein each piece represents a proportional percentage of the NFT.

As such, by controlling all Fragments, the user owns the NFT as a whole, along with the underlying rights thereof.

Token Airdrops

A crypto airdrop is a promotional event for a new blockchain-based service. In an airdrop, participants are given free crypto coins or tokens by a new service. Those looking to participate in an airdrop require a crypto wallet to do so.

CoinX will have 6 airdrop events for holders of CNX-Coins.

CNX Creditcard

Using the CNX Prepaid Card users will be able to do transactions worldwide. CNX-Prepaid Card will have Visa global coverage. Using the CNX Prepaid Card app users will be able to enact simple transactions, purchases and even withdraw money from an ATM. Using the CNX Prepaid Card app on a smartphone or tablet device will always give users full access to all their card spendings.

Spending

Users can easily add or withdraw money from their card whenever they would like. It is also possible for users to set limits on their card and add money to their card is also easy by simply doing this with the CNX Prepaid Card app. CNX-Network aims to make all payments fast, simple and secure.

Benefits

- World Wide Payments;
 - CoinX Metal Card;
 - Staking rewards in CoinX.
-
- Deposit money fee (1%, up to max 5 USD per transaction);
 - Withdraw money from any bank (1% up to max 5 USD per transaction);
 - Free card when users stake their CoinX for 6 months. (minimum 250 USD).

CNX TLD

CNX-Network will employ its own specific domain. This domain will comprise solely of high end websites, companies and software. Developers and companies can apply via the CNX-Network to settle their portfolio or information on one of these webpages with a .CNX domain. One necessary requirement is that applicants have **Costs** to have a method of payment in CNX-Network in order to receive such a website address.
